

Guestbook - PHP code challenge

Description

We want you to write a guestbook. The users should be able to:

- Create an account
- Log in
- Write/Edit/Delete Messages
- And reply to messages

Please write this without the use of any 3rd party frameworks/libraries, we are trying to see how you code and solve problems. Preferable use database as storage backend.

We would like to see that you write the app in such a secure way you possibly can.

Make sure:

- You're including a readme which describes the choices you made and why.
- You're using micro-commits.

Required techniques:

- PHP

Done?

Push all the micro-commits to a Github repository and share this with one of our recruiters.
